PRODUCT OVERVIEW

	**DELTA** Multi-Sensor Probe	Small-to-Medium Pressurized Water Mains or Sewer Force Mains / Rising Mains up to 60 inches (1500mm). Up to 3,300 ft (1km) per survey, or 6,600 ft (2km) with special upgrades.	Only available for service-related projects. Not for sale to utility customers or contractors. Contractor licensing subject to training, qualifications, and annual support agreement.
	**TRIDENT** Multi-Sensor Probe - American Version - British Version	Small-to-Medium Pressurised Water Mains or Sewer Rising Mains, up to 60 inches (1500mm). Up to 240m per survey (120m in a single direction).	Available for sale to municipal or investor-owned utilities. Available for licensing to contractors on a daily or per meter basis.
	**SWORDFISH** 	Buried lead pipe detection. Very small diameter water pipes 0.5-3 inches (13-75mm).	Available for sale to utilities and plumbers. Available for licensing to contractors on a daily or per meter basis.
	**CriticalH_2O® Cloud App**	Web-based data management & storage, including SQL database for storing real-time inspection results for Low Voltage Conductivity, Acoustic, and CCTV surveys.	Requires set-up fee, per seat licensing, and minimum 2-year software support agreement.
	**ES-600 CCTV** Optional: ES-670, ES-660, ES-650 ES-400	Medium-to-Large diameter Sewer or Stormwater Pipes, or Gravity Water Mains 6-72 inches (150-1800mm). Rack-mounted onto an existing CCTV truck or van. 1,500ft (460m) range.	Available for sale to municipal or investor-owned utilities. Available for licensing to contractors on a daily or per meter basis.
	**ES-600 Portable** Optional: ES-670, ES-660, ES-650 ES-400	Medium-to-Large diameter Sewer or Stormwater Pipes, or Gravity Water Mains 6-72 inches (150-1800mm) that are difficult to access by vehicle. 1,000ft (305m) range.	Available for sale to municipal or investor-owned utilities. Available for licensing to contractors on a daily or per meter basis.
	**ES-400 Push Rod** Optional: Plug Reel, Hand Cart ES-200, ES-50	Small-to-Medium diameter Sewer or Stormwater Pipes 4-24 inches (150-600mm). Push rod length is limited to approximately 490 ft (150m).	Available for sale to municipal or investor-owned utilities. Available for licensing to contractors on a daily or per meter basis.
	**ES-200 Push Rod** Optional: Plug Reel, Hand Cart ES-50	Small diameter Sewer or Stormwater Pipes 3-8 inches (76-150mm). Best for private laterals. Push rod length is limited to approximately 490 ft (150m).	Available for sale to municipal or investor-owned utilities. Available for licensing to contractors on a daily or per meter basis.
	**ES-25 & 50 Push Rod** Optional: Plug Reel, Hand Cart	Very small diameter Plumbing Fixtures or Industrial Tubing 0.5-4 inches (25-100mm).	Scheduled for release in late 2023.
	**CriticalSewers® Cloud App**	Web-based data management & storage, including SQL database for storing real-time inspection results for Low Voltage Conductivity.	Requires set-up fee, per seat licensing, and minimum 2-year software support agreement.

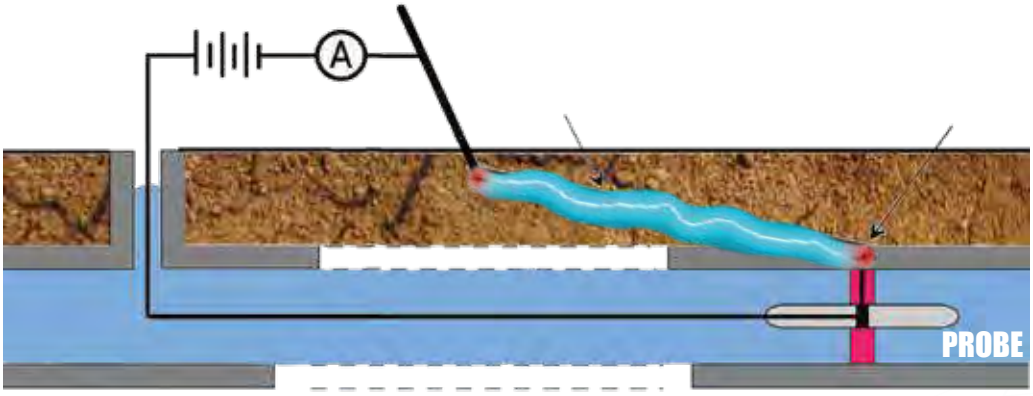
1. All products are available for international projects, and require detailed maps and a project plan addressing permitting, traffic control, and pipe access.

electroscaninc.

NON-ACOUSTIC LEAK DETECTION

How Leaks Are Found & Measured in GPM

If a pipe leaks electricity, it leaks water,
and can be measured in Gallons per Minute or Liters per Second.



- **Machine-Based Leak Location.**
- **Measures the Size of Hole by Focused Electric Current.**
- **Machine-Based Leak Quantification in GPM or LPS.**
- **As Featured in AWWA M77, ASTM F2550, JACSOMA #7**

Able to Find Leaks With 'NO FLOW'	✓	✓						
Repeatability of Leak Location +2years	✓	✓						

KEY ADVANTAGES

- No Lost Balls or Spheres. **100% Retrieval Since We're Tethered.**
- No False-Positives from Hitting the Pipe Wall like Acoustic. **Not Possible With Ohm's Law.**
- No Missed Leaks. **We Find Them All.**
- No Guessing 'Which Leak is Larger?' **Each Has a Liters per Second or GPM.**
- No High Pressure Needed. **We're Pressure-Independent; Able to Scan 0-175 psi (12 bar).**
- No Long Wait for Reports. **Data is Available in Minutes!**
- No Estimated Locations or Ranges. **Pinpoint Locational Accuracy of 1cm (0.4in).**
- No Late Night / Early Morning Testing. **Ambient Noise & Customer Pipe Usage Is Not a Factor.**
- No Effect from High Groundwater Surrounding Pipes. **Electro Scan Measures Size of Hole.**
- No Need to Increase Pipe Pressure to Hear Leak. **Electro Scan Is Non-Acoustic.**

PIPE MATERIALS

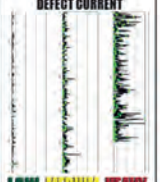
ABS	Acrylonitrile-butadiene-styrene	PCCP	Prestressed Concrete Cylinder Pipe
ACP	Asbestos Cement Pipe	PE	Polyethylene
BRK	Brick	PFP	Pitch Fiber Pipe
CMLSP	Cement Mortar Lined Steel	PP	Plastic Pipe
CON	Concrete	PVC	Polyvinyl Chloride
CIPP	Cured-In-Place Pipe	RCP	Reinforced Concrete Pipe
DIP	Ductile Iron (w/Protector 401)	RPM	Reinforced Plastic Mortar
FRP	Fiberglass Reinforced Pipe	RTR	Reinforced Thermosetting Resin
FRPM	Fiberglass Reinforced Polymer	SIPP	Spray-in-Place Pipe
GRP	Glass Reinforced Pipe	SPR	Spiral Wound Pipe
HDPE	High Density Polyethylene	TC	Terracotta or Clay Pipe
ORP	Orangeburg Pipe	VCP	Vitrified Clay Pipe
PB	Polybutylene		

PRE-REHABILITATION

Asbestos Cement Pipe

Electro Scan FELL is unique in its ability to geometrically map the remaining wall, i.e. corrosion of ACP.

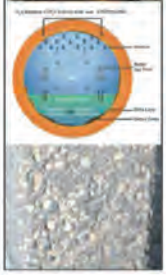
Finding & Measuring Pipe Corrosion Using Electro Scan's Patented Data Analytics



CORROSION

DEFECT FLOW

As demonstrated by independent benchmarks, since acoustic and transient pressure sensors are unable to provide detail geometric assessments of pipe walls, and therefore unable to estimate remaining pipe walls, Electro Scan represents a game changing solution to assess & prioritize ACP.



High Density Polyethylene Pipe

Poor mechanical or fused joints are the Achilles heel of HDPE, and not seen by CCTV cameras or heard by acoustic data loggers or sensors. But, found & quantified by FELL in accordance with ASTM F2550.

Evenly Spaced Defects Indicate Problem Joints.

What Electro Scan Finds Most?

Inadequate Clamping or Restraint during Fusion (Below)

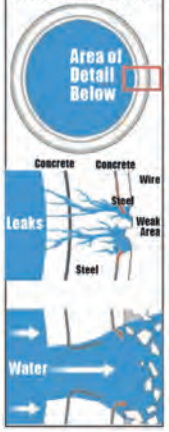
Prestressed Concrete Cylinder Pipe

Electro Scan represents the only technology able to reliably & consistently find & measure leaks in GPM.

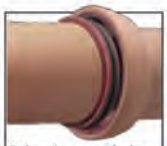
While other devices may attempt to locate corroded wire mesh that may or may not indicate a weakness in the pipe wall, Low Voltage Conductivity represents a game-changing solution to provide unbiased leak locations & severity for each defect.

Superior to acoustic and electromagnetic sensors, Electro Scan's Low Voltage Conductivity detects leaks other technologies miss.

How PCCP Fails?



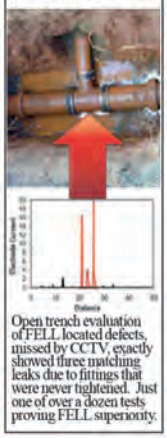
Vitrified Clay Pipe



It doesn't matter whether you evaluate VCP from the outside or inside of a pipe, CCTV, Laser, LIDAR, Sonar, GPR, or Acoustic, are not able to detect or measure defect flows.

Electro Scan's FELL is the only technology, representing a Non-Destructive Test (NDT) able to follow a 90° pipe bend to locate a pathway for water to enter or exit a pipe.

By measuring the change in current and the amount of flow, the size of the opening can be computed and translated into an estimated GPM.



Open trench evaluation of FELL located defects, missed by CCTV, exactly showed three matching leaks due to fittings that were never tightened. Just one of over a dozen tests proving FELL superiority.

POST-REHABILITATION

Cured-In-Place Pipe

CIPP liners may not be watertight and defects not seen by certified operators using CCTV cameras. As a result, ASTM F2550 should be added to CIPP specifications to ensure pipe quality & integrity.

LEAKS

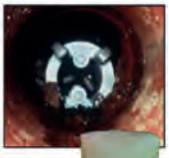
PINHOLES

SOAKAGE

RECOMMENDED USE:

To Find & Quantify Leakage From

- Accelerant Burns
- Accidental Cuts
- Bad Service Reconnect
- Bad Lateral Liners
- Blisters
- Delamination
- Defective Epoxy
- Equipment Damage
- Foreign Objects
- Pinholes
- Poor Curing
- Overcooking
- Stretching
- Top-Hat Defects
- Wet-Out Failures
- Wrinkles, including: Buckling, Fins, Folds, Lifts, and Ridges

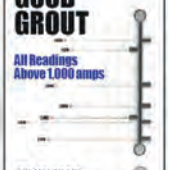


Grout

FELL is now preferred over using traditional packers to test joints for water tightness, due to FELL's Non-Destructive Testing (NDT) of joints, laterals, and cracks.

Unlike air testing, FELL does not force any added pressure on joints or laterals. Since air testing can open joints, shift pipes, and even temporarily correct out-of-round conditions in plastic pipes as areas around joints are inflated, packers are no longer recommended for testing the quality of joints or laterals.

GOOD GROUT



SIX-MONTH OLD

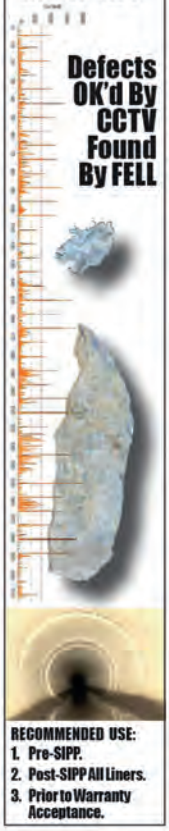
DEGRADED GROUT

RECOMMENDED USE:

1. All Pre-Grouted Pipes.
2. Post-Grouted Pipes, 6-12 Months After Grout to Detect Drying or Shrinkage.
3. Prior to Warranty Acceptance.

Spray-In-Place Pipe

DEFECTIVE (NEW) SIPP



RECOMMENDED USE:

1. Pre-SIPP.
2. Post-SIPP All Liners.
3. Prior to Warranty Acceptance.

Spiral Wrap Pipe

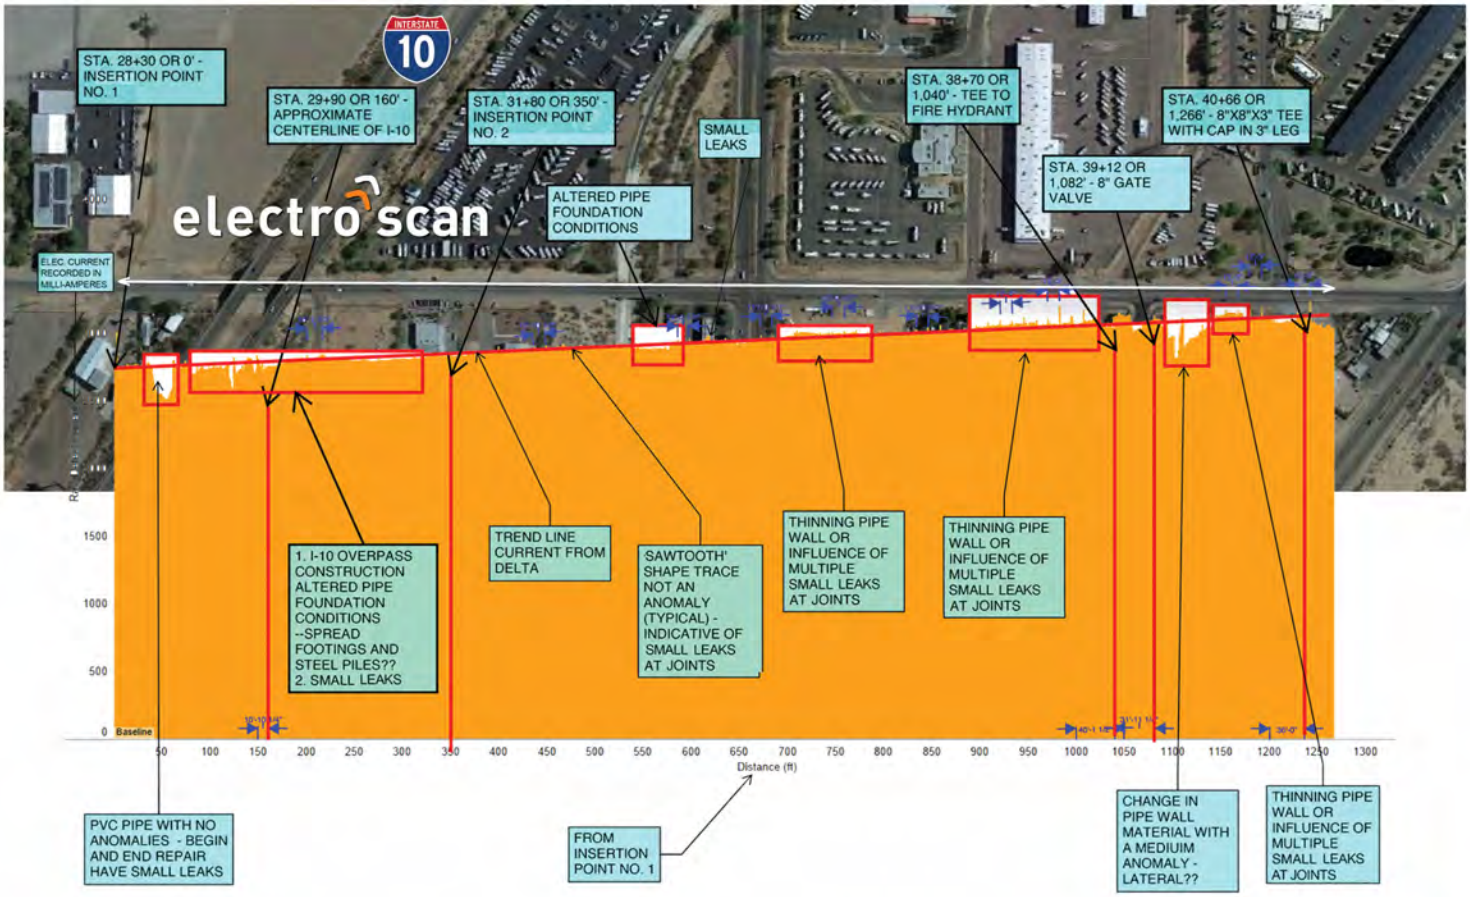
Locking individual wraps is key to any successful Spiral Wrap Pipe project, with problems not identified by CCTV.

In contrast, Electro Scan FELL inspection can find defects to individual couplings.

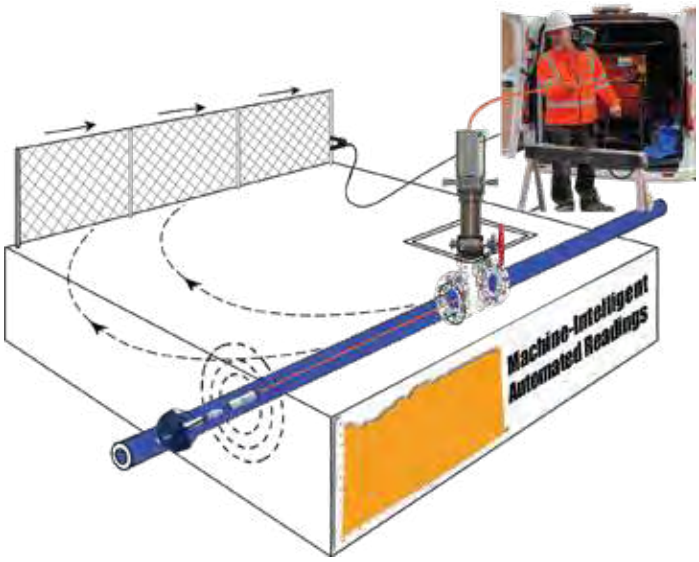
RECOMMENDED USE:

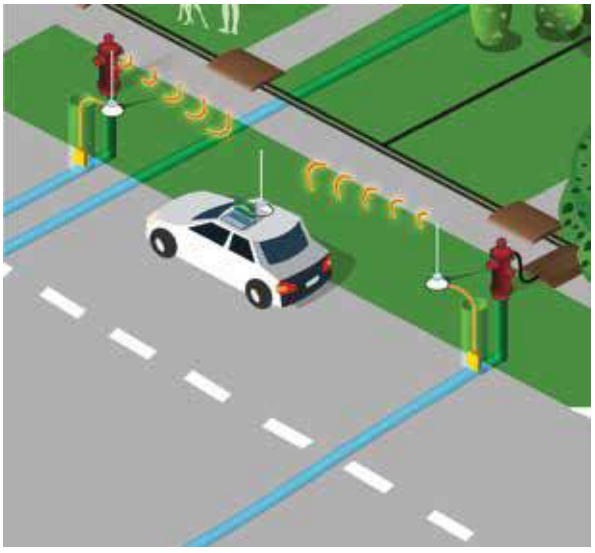
1. Pre-Spiral Wrap.
2. Post-Spiral Wrap.
3. Prior to Warranty Acceptance.

PIPE WALL THICKNESS



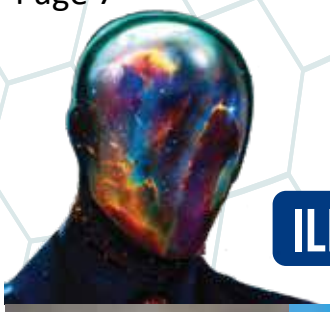
Full-Length 360-Degree vs. Average for Entire Pipe





ACTIONABLE DATA

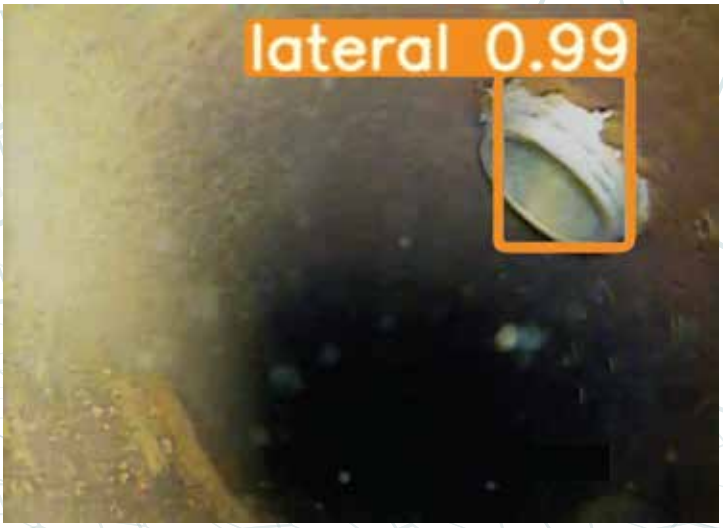
NO ACTIONABLE DATA

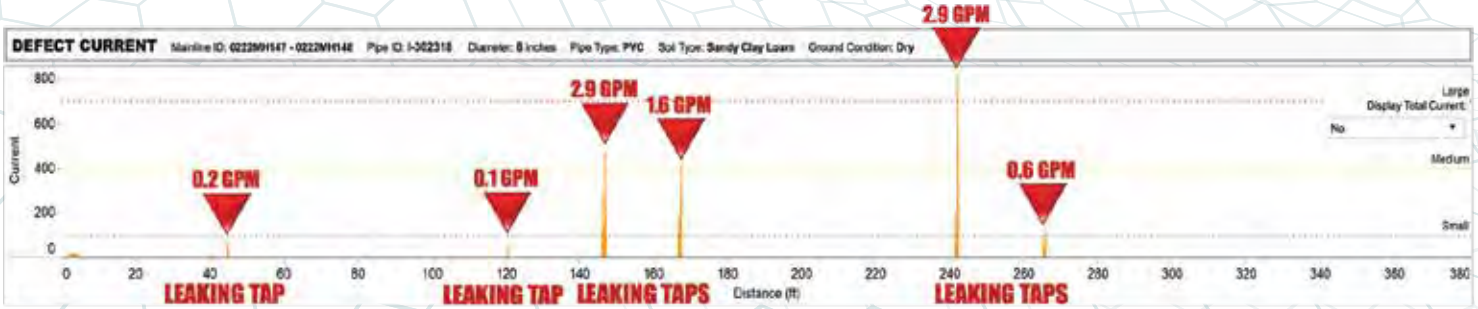


electro scan inc.

ILLEGAL & LEAKING TAP CONNECTION ASSESSMENTS

ELECTRO SCAN USES PINPOINT ACCURACY AND AI-CCTV TO ACCURATELY IDENTIFY LEAKS AT TAPS v. PIPE WALLS





electro scan inc.

AI PARTICLE TRACKING

Electro Scan is developing an AI model that finds leaks in pressurized pipes by tracking the flow of suspended particles. When the program detects particles flowing directly into the pipe wall, indicating a leak, it flags the location.

While we routinely find leaks with our FELL technology not found by other inspection methods, we believe it's important to continue innovating, as our goal is to provide you with as much quality, actionable data as possible.

We continue to train the model with real world inspections, and look forward to bringing this one-of-a-kind kind program to the market.

DETECT LEAKS IN PRESSURIZED PIPES USING AI AND CCTV

- Tracks particles in three dimensions
- Vastly improves the ability of CCTV to detect leaks
- Works with Delta and Trident multi-sensor probes for unparalleled accuracy

NEW PRODUCT

SWORD FISH

THE NO-DIG SOLUTION FOR FINDING LEAD IN BURIED PIPES

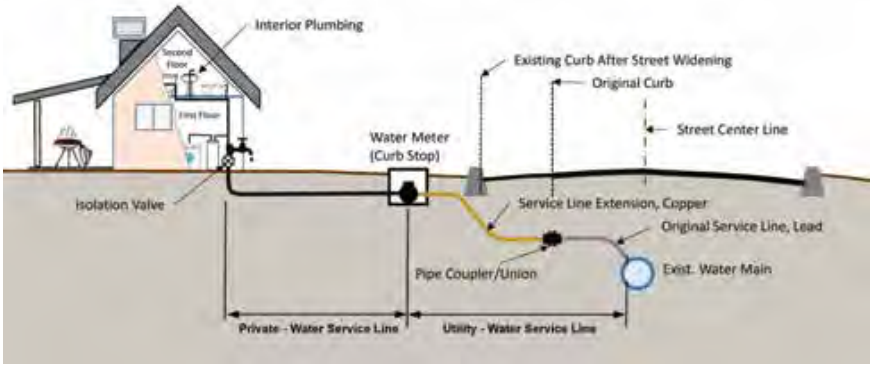
LEAD DETECTION

electro scan inc.

SWORDFISH

APPLICATIONS

SWORDFISH IS THE WORLD'S FIRST HAND-HELD BURIED LEAD PIPE DETECTION TOOL. USING AN AUTO-FED CABLE AND LOW-VOLTAGE CONDUCTIVITY PROBE, SWORDFISH AUTOMATICALLY IDENTIFIES LEAD PIPES. READINGS ARE TRANSMITTED IN REAL-TIME TO ELECTRO SCAN'S CRITICAL H2O CLOUD APPLICATION, WITH RESULTS INDEPENDENTLY VERIFIED USING 3M LEAD TEST KITS FOR 100% VERIFICATION OF LEAD PIPE.

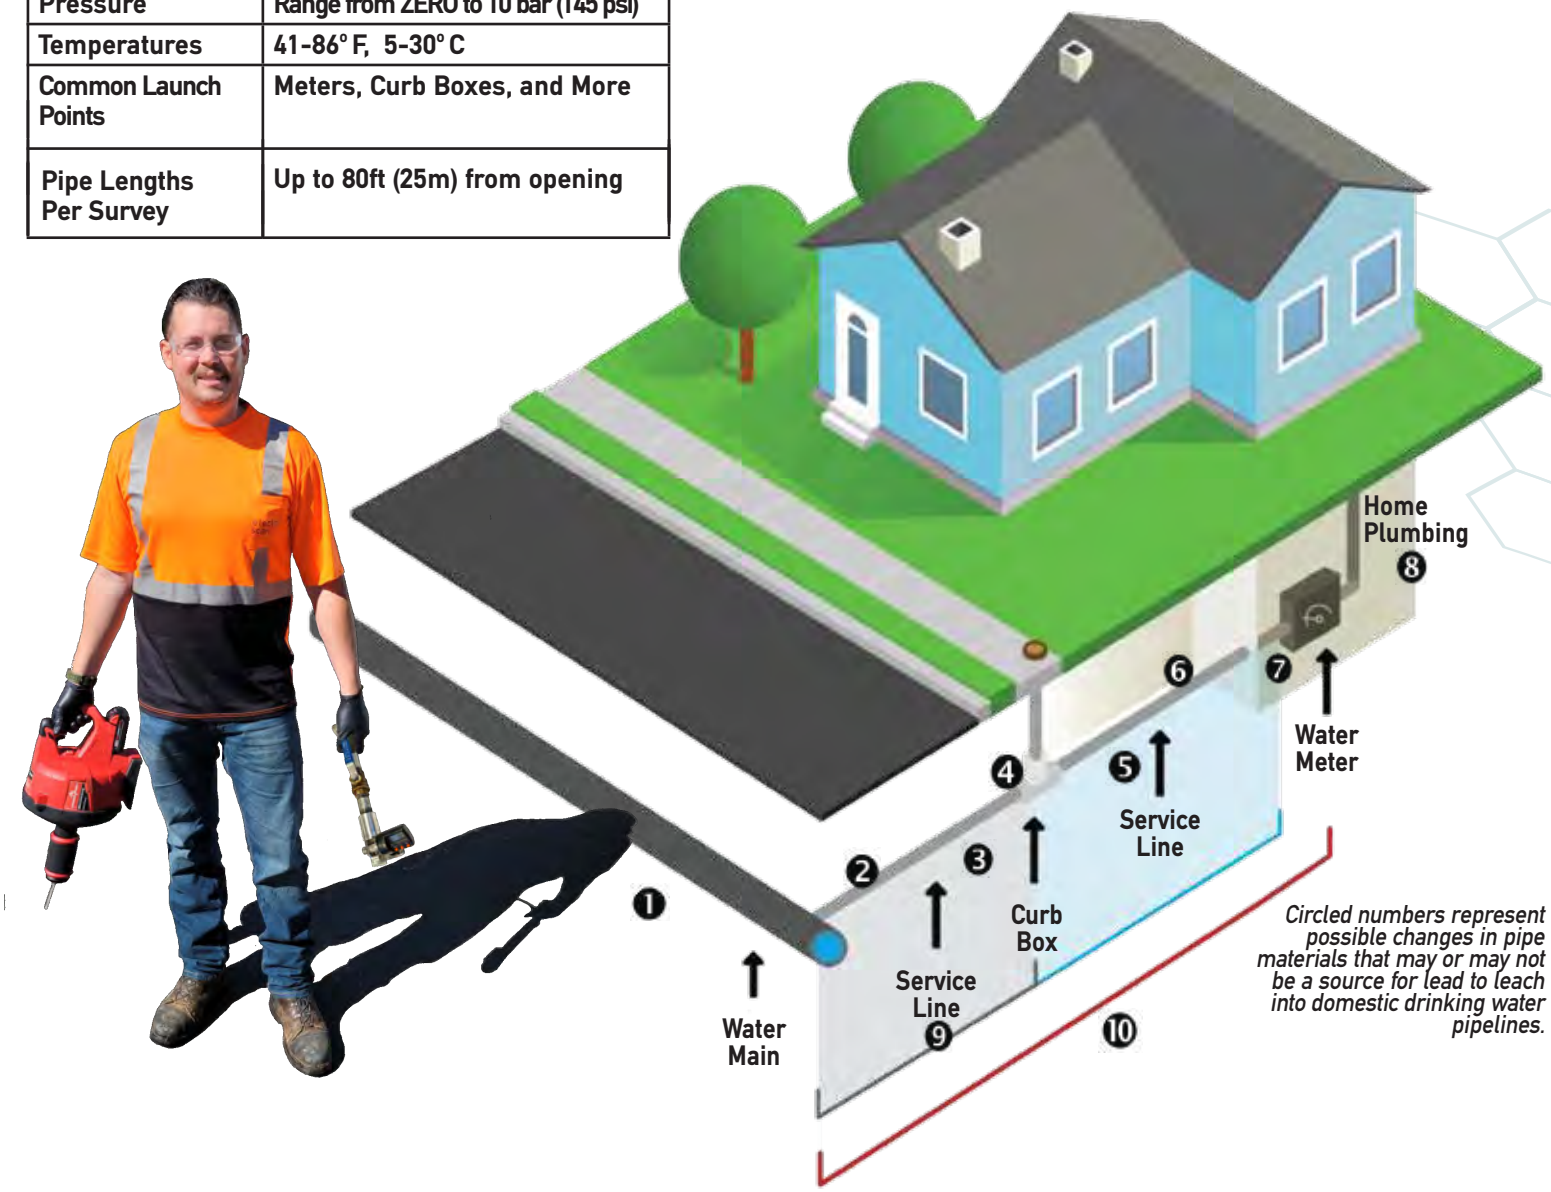


BURIED LEAD PIPE DETECTION

electro scan inc.

SWORDFISH

Features	Buried lead pipe detection
Pipe Diameters	0.5" to 3" (13mm to 75mm)
Pressure	Range from ZERO to 10 bar (145 psi)
Temperatures	41-86° F, 5-30° C
Common Launch Points	Meters, Curb Boxes, and More
Pipe Lengths Per Survey	Up to 80ft (25m) from opening



Circled numbers represent possible changes in pipe materials that may or may not be a source for lead to leach into domestic drinking water pipelines.

STANDARD OPERATING PROCEDURE

1 Hydrant, Hot Tap, or Valve

Hydrant Entry

Hot Tap

Actual Field Insertion

2 Flow Meter

Electro Scan first measures flow velocity and flow direction before any leak survey.

3 Chlorination & Cleaning

In addition to passing 'materials in contact' testing requirements, Electro Scan does not use any equipment except as designed for water networks, with all components cleaned & sanitized before its use in pressurized water mains.

4 Insertion Tube

Electro Scan's insertion tube is carefully lowered into place and secured before inserting its multi-sensor probe.

5 Probe Launch

After a final pre-insertion cleaning, the Electro Scan probe is lowered into the insertion tube with the pipe re-pressurized.

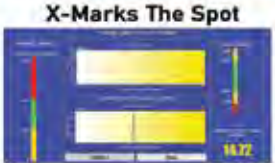
6 Push Reel

Utilizing a two-person team, Electro Scan's Trident is spooled off the reel and then pushed through the insertion tube for initial deployment.

7 Data & Video Capture

Utilizing a two-person team, Electro Scan's TRIDENT is carefully 'spooled' into its insertion tube, then 'pushed' through the insertion tube for full pipe length deployment. Representing a breakthrough, data acquisition and video do not require operator interpretation.

X-Marks The Spot

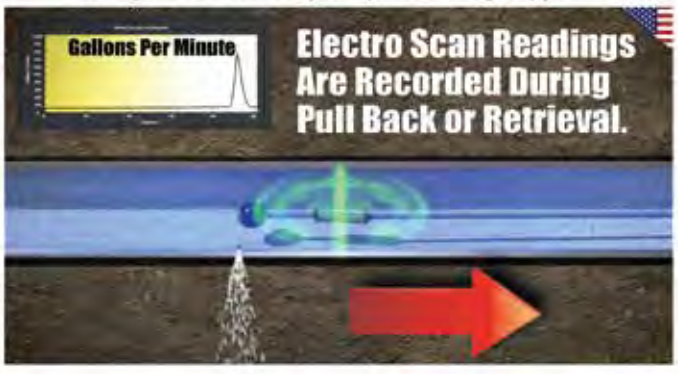


8 CCTV *Push Forward Direction*

Closed-Circuit Television (CCTV) video is automatically captured and streamed real-time so operators can navigate through valves and around obstructions.

9 Electro Scan *Pull Back Direction*

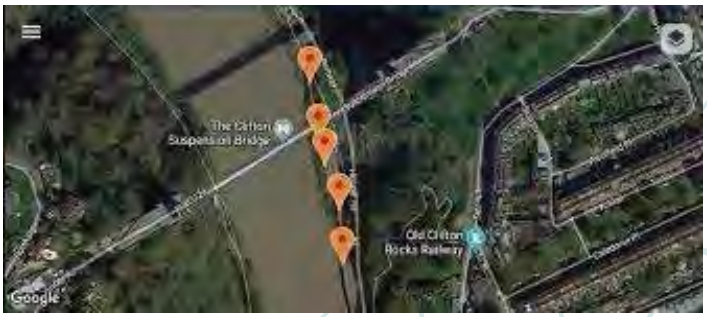
Once a maximum distance is achieved (up to 400ft or 120m), then the operator begins recording Electro Scan data as the probe is pulled back through the pipe.



10 Probe Retrieval

After the probe has exited the water main, while still in the insertion tube, the gate valve may may be closed to allow for the probe to be fully retrieved from the pipe.

LINE LOCATION



DRAWBACK OF GROUND PENETRATING RADAR: DIFFICULT TO LOCATE WATER MAINS

ES-600 STANDARD SPECIFICATIONS AND FEATURES

ES-600 Series	Conveyance	Combined Sewer & Storm Systems, Separated Gravity Mains, Gravity Water Mains, Force Mains, Siphons, and Stormwater Networks.	
	Required Flow	None. Dry, Partially, or Fully-Surcharged Flow. Aided by Jet Truck.	
	Pipes	Pipe Diameters	ES-670: Up to 72 inch (1800mm) ES-660: 6 to 60 inch (150 to 1500mm) ES-650: 6 to 30 inch (150 to 800mm) ES-400: 4 to 16 inch (100 to 400mm)
		Pipe Shape	Any, including Circular, Box, Egg-shaped, Oval, and Trapezoidal.
		Pipe Materials	Any Electrically Non-Conductive Pipe Walls, including Asbestos Cement, Brick, Cement Mortar Lined and Coated Steel, Cured-In-Place Pipe, Ductile Iron with Epoxy Coatings, Fiberglass Reinforced Pipe, High-Density Polyethylene Pipe, Prestressed Concrete Cylinder Pipe, Polyethylene, Polyvinyl Chloride, Reinforced Concrete, Vitrified Clay Pipe, etc.
	System Specification	Dimensions	ES-660 & ES-670 Length: 36 in (914mm); Diameter: 3 in (76mm)
		Scan Recording	Critical Sewers® Field Laptop PC, Wifi Connection to Critical Sewers® Cloud Application.
		Speed	45-60 ft/minute (15-20 meters/minute)
		Operating Temperature	20°F to 120°F (-7°C to 50°C)
		Power Supply	120VAC / 60Hz - or - 220VAC / 50Hz
		Range	1,500 ft (460m) range from single point of access.
		Current (max)	40 mA
		Electrical Array	Focused tri-electrode array
		Defect Flow Calculation	± 30% Accuracy measured in Gallons Per Minute (GPM) or Liters Per Second (LPS).
		Defect Location	ES-650 & ES-660 ±0.4 inches (1cm) ES-670 ±1 inch (2.5cm)
	Advantages	1. No manual coding required. 2. Finds & measures all leaks at cracks, joints, tap connections, and pipe wall. 3. Measures leaks in GPM (LPS). 4. No bypass pumping required for inspection. 5. Use in field rain or shine. 6. Recommended for all Pre- and Post-Rehabilitation. 7. Finds defects not seen by CCTV, such as inside joints. 8. Differentiates superficial cracks from cracks through pipe.	9. Repeatable test results, as verified by US, UK, German, Japanese, and Australian testing. 10. Finds & measures defects hidden by grease, silt, & encrustation. 11. Automatically evaluates 360° of pipe wall. 12. Determines water tightness of sewers & lateral connections. 13. Robust design has no moving parts. 14. Recommended by WRc, developers of NASSCO CCTV Codes. 15. Reports available in minutes, not hours, days, or weeks.
	Limitations	1. Does not provide a clock position of defect location inside the pipe, but location is accurate to within 0.4 inches (1cm). 2. Cannot scan pipes with obstructions or collapsed sections.	

electro scan inc.
